

## CASE STUDY

Built a payment application to pay anywhere and everywhere with fast and secure checkout process.

### CHALLENGES

The client was in need of a contactless payment solution that enables real-time transactions with just a few clicks.

The solution should support quick transactions such as social payments or account-to-account payments, which can be completed in seconds using a unique payment ID.

### SOLUTIONS

After conducting a comprehensive analysis, our team recommended Flutter as the framework for a quick and minimal setup process to build the application within the planned launch time.

The solution enabled the customer to seamlessly transfer funds between phone numbers to phone numbers, accounts to accounts and so on without experiencing any issues or glitches.

### BENEFITS

The system's one-click checkout feature eliminates the need for tedious and time-consuming account setup, allowing customers to complete transactions with few clicks.

In addition to that our payment system also emphasizes rewards and benefits to enhance the overall customer experience. Customers can earn loyalty points, cashback, or other rewards for using the payment system, which will encourage them to use it continuously.
